14 January 2024 – still in development

I created a fullstack project for my parents' business, I want to create a concept where customers no longer need to carry a menu book and order physically, just by using a cellphone, customers can see the menu, order the menu, and find out the status of their order, but I want customers to be able to order remotely so I still want to develop this project by adding features such as payment gateway, order and delivery status, and many more

About Website

- **Tech Stack** : NextJs, Firebase, NodeJS
- **Feature** : Admin Panel, Dark Mode, Cart Orders, Orders Status, Animation & Transition (Framer Motion)
- **Pages** : Home Menu, Orders, Status, Login, Register, Admin
- **Implemented Restfull Api** to connect data between the Back-End and Front-End by utilizing NextJS features similar to Laravel where Front-End and Back-End are in the same folder so that work becomes easier.
- **Implemented Modular Components**, I make code that is written repeatedly modular so that in addition to making the code more neat and organized, the code becomes more efficient and easy to scale.
- **Implemented React Redux**, in this case I use Redux one of them to update and display cart notifications and also the user's order status so that the stats can be accessed globally.
- **Implementing Animation and Transition**, I use framer motion as a framework for website animation needs, there is a transition on the website every time the user switches pages
